ENGAGEMENTS

Move through the workflow. Keep the room anchored.

Eight detailed screen concepts and an interaction contract for a discoverable, predictable session.

PROPOSED · NOT IMPLEMENTED

Prepared for George Seib
Based on the Relay expansion review
Session 7924 · October 14, 2026

Offline HTML prototype + static design booklet. No production changes, live data collection, or published site.

THE CENTRAL CHANGE

The workflow is navigation. The live room keeps its place.

Browse Setup or any round phase directly. Keep familiar Players, Questions, Rounds and Settings close, with an explicit live marker and safe return.

01 Session-level destinations

Setup and Finish sit outside the repeated round loop.

02 Clickable round workflow

Answer → Vote → Review → Ask repeats each round.

03 Four familiar places

Players, Questions, Rounds and Settings stay visible.

04 View separately from live

A viewed step is not a command to rewind participants.

05 Make effects explicit

Apply a scoped edit, Send an ask, or Start the next round.

00

Navigation and live progress are different.

Setup and wrap-up happen once per session. Answer → Vote → Review → optional asks repeat each round.

1

PREPARE + JOIN

Choose host-only or host + room screen. Open Presenting. Show participants joining.

2

ANSWER → VOTE

State the task. Confirm receipts. “Close answers & start voting” names the next effect.

3

WHAT WE HEARD

Read results and Workie. Show preparing → asks ready; keep point-adjacent shortcuts.

4

OPTIONAL ROOM ASKS

Preview Ideas, Choose, Rate, or targeted Comments. Send deliberately, or skip.

5

NEXT ROUND / FINISH

Repeat the same round structure, or preview the report with its stated privacy scope.

What am I viewing?

The outlined workflow step identifies the host view. The green LIVE marker identifies the active participant phase, even when you browse elsewhere.

Where is the room?

Present and phone previews remain anchored to the live state. Navigating to a previous or future phase never broadcasts it automatically.

How do I make a change?

Apply states the scope: now, future rounds, or locked while live. Show on Present is a separate display action; it does not reopen submissions.

How do I get back?

Return to live room is always available. Start round 3 advances from round 2 Ask to round 3 Answer. Browsing Finish does not end the session.

Developer context: the test deliberately defaults to one screen. The supplied /host?surfaces=two entry enables the two-screen workflow and is remembered in that browser. Asks prepare asynchronously beside related points; a count appears in the dock.

01

Revisit Setup without rewinding the room.

Setup is the guided overview. The sidebar gives direct access to Players, Questions, Rounds and precise Settings.

ROUND 2 · STILL LIVE IN REVIEW

Make the safety gate concrete.

Name the evidence that would justify adding more technicians.

Our task: Which long-standing process or structure must be dismantled, who benefits, and how do we bring them with us?

Workie · page 4 of 6

Up next: Optional room questions

VIEW ≠ LIVE

Two markers, one meaning.

An outline shows Setup as the viewed destination. Green LIVE remains on Review. Return to live room restores the host's working view.

Engagements
Round 2 · Meiji

Look up at the room screen.

A prompt will appear here if the host asks for your input.

✓ Answer received
✓ Ballot received

WORKFLOW

Click to inspect.

The rail navigates the host view. It is not an automatic command to move participants.

SIDEBAR

Keep the familiar menu.

Players, Questions, Rounds and Settings remain visible in every host view.

SCOPE

Apply changes deliberately.

Session name applies now; categories apply to future picks; live submissions stay protected.

02

Choose the scope before applying.

Settings is the direct control panel. The live task and accepted submissions remain protected while the host edits.

Workie · page 4 of 6

Up next: Optional room questions

ACTIVE DESTINATION

Settings is easy to find.

The selected sidebar item is highlighted. The workflow still shows where the room is, and Return to live room stays in the dock.

Engagements
Round 2 · Meiji

Look up at the room screen.

A prompt will appear here if the host asks for your input.

✓ Answer received
✓ Ballot received

APPLY NOW

Safe session details.

An explicit Apply changes the session name without touching the live phase.

APPLY LATER

Future picks only.

Category changes affect future automatic picks; current and explicit queued questions stay clear.

PROTECTED

Do not silently reopen.

The normal navigation path never changes accepted submissions or restarts a phase.

03

Keep the actual task in the room.

The room display should support the activity, with a clear instruction, receipt count, and next step.

ANSWERS ARE OPEN

Keep the team task in view.

Which long-standing process or structure must be dismantled, who benefits, and how do we bring them with us?

3 / 4 answers received

Waiting for 1

Maya	✓ Received
Theo	✓ Received
Lena	✓ Received
Omar	Writing…

Close only when the room is ready. If a response is still missing, offer “Keep collecting” or “Close with 3 answers.”

3 answers received · closing moves the whole room to voting

Pause collection

Close answers & start voting

PRESENT · WHAT THE ROOM SEES

ENGAGEMENTS ROOM 7924

ROUND 2 · ANSWER ON YOUR PHONE

What should change?

Which long-standing process or structure must be dismantled, who benefits, and how do we bring them with us?

3 of 4 answers received

Up next: Read & rank responses

VOTING VARIANT

Carry the task forward.

Use the same task panel in voting. Show full responses before ranking, then “Close voting & show results.”

Engagements
Round 2 · Meiji

Your response is saved.

You can return to this room without sending it again.

✓ Round 2 answer received
Waiting for voting to open

OBSERVED

Present missed the actual task.

The task appeared on host and participant answering views, but not Present.

PROPOSED

Show honest readiness.

Count accepted submissions. Never infer that all participants are ready to close.

NAVIGATION

The dock stays in place.

Only the precise phase action changes; its location, size, and hierarchy stay stable.

04

Reading pages should only turn pages.

Keep the page pager inside the review card. Give asynchronous room asks a visible, non-blocking status.

PRESENT · WHAT THE ROOM SEES

ENGAGEMENTS ROOM 7924

ROUND 2 · REVIEW TOGETHER

Make the safety gate concrete.

Name the evidence that would justify adding more technicians.

Our task: Which long-standing process or structure must be dismantled, who benefits, and how do we bring them with us?

Workie · page 4 of 6

Up next: Optional room questions

END OF REVIEW

A real landing state.

At page 6, show three paths: Open room asks, Next round without asks, or Finish session. Do not transform the page arrow.

Engagements
Round 2 · Meiji

Look up at the room screen.

A prompt will appear here if the host asks for your input.

✓ Answer received
✓ Ballot received

OBSERVED

An ambiguous early exit.

Next round bypassed two ready asks. Exact pixel motion was not measured.

DEVELOPER CONTEXT

Asks are asynchronous.

Point-adjacent icons and the ready count can arrive after reading begins.

PROPOSED

Shortcuts plus a labeled route.

Keep icons near the source point, but do not rely on icons alone for discovery.

05

Make the next conversation deliberate.

Preview the prompt, format, audience, and privacy. A short optional step gives the host a clear choice.

Respond to an item

Prompt shown on phones and Present

What is one measurable gate Relay should pass before more technicians are added?

Why ask: surface concrete, testable conditions before discussing expansion.

Anonymous ideas. Only ideas selected by the host appear on Present and in the report.

Private draft · live room remains Round 2 Review

Skip asks and continue

Send Ideas to room

PRESENT · WHAT THE ROOM SEES

ENGAGEMENTS ROOM 7924

ROUND 2 · REVIEW TOGETHER

Make the safety gate concrete.

Name the evidence that would justify adding more technicians.

Our task: Which long-standing process or structure must be dismantled, who benefits, and how do we bring them with us?

Workie · page 4 of 6

Up next: Optional room questions

CURRENT → PROPOSED

Name the difference.

Current: Request feedback. Proposed: Comments, with a clear target. Ideas / Choose / Rate remain anonymous structured asks.

Engagements
Round 2 · Meiji

What is one measurable gate?

Preview only · Ideas

Your idea...
Up to 280 characters

Anonymous. Only selected ideas are shown and reported.

FORMAT

Clear jobs, not only icons.

Ideas gathers suggestions; Choose compares options; Rate tests a principle.

PREVIEW

Preserve a useful pattern.

The current phone prompt and purpose preview were helpful in the review.

SKIP

Optional means optional.

“Skip asks and continue” is a first-class choice; no mandatory question.

06

Make reconnects reassuring and truthful.

Receipt, presentation selection, and score are different states. Recovery should check the saved submission.

LIVE ROOM

Round 2 · Ask

Browsing does not move participants.

Return to live room →

IDEAS · LIVE COLLECTION

What is one measurable gate?

Anonymous ideas. The host selects which ideas appear on Present and in the report.

3 / 4 received

1 reply still open

Reconnect without losing trust.

A receipt confirms acceptance. If status is uncertain after reconnecting, show “Checking your saved reply…” rather than saying nothing was sent.

3 of 4 replies confirmed · one participant is still replying

Keep collecting

Close ideas & view replies

PRESENT · WHAT THE ROOM SEES

ENGAGEMENTS ROOM 7924

ROUND 2 · IDEAS · REPLY ON YOUR PHONE

What is one measurable gate?

Keep it concrete. What should Relay prove before more technicians are added?

3 of 4 replies received

Up next: Review replies together

RECOVERY

Use the saved receipt.

After verification: “Reply received. You’re all set.” A reload must not imply that a retained answer disappeared.

Engagements
Round 2 · Meiji

Checking your saved reply…

You reconnected. We’re confirming your last submission.

Previous round:
✓ Answer received
✓ Ballot received

OBSERVED

A transition needed reloads.

First ask failed to reach existing participants after the opt-in transition.

OBSERVED

The message contradicted records.

Rejoin claimed no response despite scores and retained original answers.

PROPOSED

Treat uncertainty explicitly.

Check saved status, deduplicate retry, and retain draft plus receipt context.

07

Keep a preference separate from a decision.

Use clear totals and preserve differences. Show exactly how selecting an idea changes display and report scope.

LIVE ROOM

Round 2 · Ask

Browsing does not move participants.

Return to live room →

CHOOSE · COLLECTION CLOSED

A preference, not a decision.

Which change should the team work on first?

A · Clarify assignment ownership 3

B · Validate offline recovery 0

C · Reset expansion commitments 1

No expansion decision recorded.

Keep the 3–1 difference visible. Agreement on safeguards does not create a launch date or consent.

Round 2 complete · next begins Round 3 Answer

Ask another question

Start round 3

PRESENT · WHAT THE ROOM SEES

ENGAGEMENTS ROOM 7924

ROUND 2 · CHOOSE RESULTS

Which change comes first?

Assignment ownership 3

Offline recovery 0

Expansion commitments 1

4 replies · collection closed

Up next: Discuss, or start the next round

IDEAS VARIANT

Selection has a scope.

“4 submitted · 1 selected for display and report.” Button: “Select for display & report.” Unselected ideas remain excluded by design.

Engagements
Round 2 · Meiji

Results are ready.

3 chose ownership. 1 chose expansion commitments.

Your individual choice remains anonymous.

EVIDENCE

Structured asks mattered.

Observed 3–1 split; options rewritten here. This is not a newly measured poll.

PRIVACY

Keep intentional anonymity.

Do not restore names or mandate all submitted Ideas in the report.

MEANING

Write the decision separately.

Host-entered room notes capture conditions, dissent, and unresolved points.

08

Leave with an honest record.

A report preview should explain what is included, what is deliberately omitted, and what remains unresolved.

Return to live room →

SESSION WRAP-UP PREVIEW

Leave with an honest record.

Keep suggestions, preferences and agreed commitments separate.

Answers and ballots so far	**8 / 8**
Workie analyses so far	**2**
Ideas	**4 received · 1 selected**
Choose / Rate	**Aggregate results**

Said in the room

“No approval to expand to all 40 today. Staged preparation remains conditional; no launch date or numerical reliability threshold has been agreed.”

Proposed report includes the original team tasks, response results, Workie, selected anonymous Ideas, aggregate Choose/Rate, named targeted Comments, and host-entered room notes.

Excluded by design: unselected Ideas and individual structured-ask identities.

Viewing Finish · the live room has not ended

Finish session & preview report

Return to live room

PRESENT · WHAT THE ROOM SEES

ENGAGEMENTS ROOM 7924

ROUND 2 · STILL LIVE IN REVIEW

Make the safety gate concrete.

Name the evidence that would justify adding more technicians.

Our task: Which long-standing process or structure must be dismantled, who benefits, and how do we bring them with us?

Workie · page 4 of 6

Up next: Optional room questions

FINISH PREVIEW

Still a private view.

Browsing Finish does not end the room. The explicit Finish action closes the session; the report keeps its stated privacy scope.

Engagements
Round 2 · Meiji

Look up at the room screen.

A prompt will appear here if the host asks for your input.

✓ Answer received
✓ Ballot received

OBSERVED

A useful room note survived.

The retained note distinguished conditional preparation from approval.

PROPOSED

Report actual settings.

Distinguish active categories from broad catalog descriptions.

BOUNDARY

No automatic commitments.

Scores, Workie suggestions, and a rating do not become adopted decisions.

09

A stable contract for navigation and action.

Consistency is about location, wording, and consequence. Context-specific verbs can change, but the job should never drift.

REGION / JOB	EXACT PROPOSED LABELS	RULE
Session workflow	Setup · Answer · Vote · Review · Ask · Finish	Clickable host navigation. Setup / Finish are session-level; the middle four loop each round.
Always-visible sidebar	Players · Questions · Rounds · Settings	Stable destinations and active marker. Setup is the guided overview; Settings provides precise controls.
Viewed versus live	LIVE · Round 2 Review Viewing Setup / Return to live room	Differentiate the browsed view from active participant phase. Returning restores the live host view.
Settings scope	Apply session name / Apply to future picks	Name applies now; categories affect future automatic picks. Current task, accepted answers and ballots stay protected.
Bottom-right phase action	Send Ideas to room / Send Choose to room Send Rate to room / Send Comments to room	Names the selected format. “Send to the room” is the current app label; the longer variant is proposed.
Display-only action	Show this view on Present / Restore live display	Explicitly changes the audience display. Does not reopen submissions or change participant phase.
Round transition	Start round 3 / Skip asks and start next round	An explicit live action increments the round and starts Answer. Rail browsing never performs this transition.
Result selection	Select for display & report	Matches the actual consequence: selected anonymous Ideas appear on both surfaces.
Session end	Finish session & preview report	Browsing Finish previews the close. The explicit finish action ends live collection before report review.

Current vocabulary → proposal: Presenting → Open Present (role-explicit action); What we heard → kept as the review heading; Request feedback → Comments (with target); structured ask icons → keep as shortcuts alongside labeled format cards.

Implementation detail: keep livePhase/liveRound and viewedPhase/viewedRound as separate state. Page navigation is local; save the live review page when browsing elsewhere. On narrow screens, the four sidebar destinations become a persistent compact navigation row.

10

Build the smallest useful improvement first.

Prioritize orientation and safe transitions before adding polish or more required steps.

P0

Separate viewing from live progress

Clickable workflow, independent live marker, stable audience preview, and Return to live room. Setup / Finish are outside the round loop.

ACCEPTANCE CHECK

Browse Setup, a previous round, and a future phase: participant phase, receipts and display remain unchanged.

P0

Preserve familiar navigation

Players, Questions, Rounds and Settings in the sidebar, with active state and compact mobile navigation. Setup remains an overview.

ACCEPTANCE CHECK

Open each destination, find its expected content, and return to the live view without losing the live review page.

P0

Restore trustworthy receipts

Read saved submission status on reconnect; use pending / received / checking / failed; idempotent retry and draft retention.

ACCEPTANCE CHECK

Reload after answer, vote and each ask type: no false missing-response message or duplicate submission.

P1

Explain async readiness and privacy

Preparing follow-up questions → N asks ready. No focus jump. Preview anonymity, named comments, and selected-only Ideas scope.

ACCEPTANCE CHECK

Slow ask generation never blocks a host; a host can state what the report includes before sending.

P1

Give edits and transitions an explicit scope

Apply now / future rounds / locked live. Display publishing is separate from phase progression. Next round increments to Answer.

ACCEPTANCE CHECK

Edit a future category, return to live, start the next round: only the next automatic picks change; existing results remain intact.

P1

Keep reports faithful to scope and meaning

Add original team tasks and actual enabled settings. Keep selected-only anonymous Ideas and aggregate Choose/Rate. Distinguish decisions.

ACCEPTANCE CHECK

A reader can reconstruct the task and conditional outcome without mistaking votes for approval.

11

What this concept establishes—and what it does not.

Grounded in the actual six-round review, with deliberate product choices and newly supplied context separated from findings.

Review evidence

Six rounds, 24 answers, 24 ballots, six Workie analyses, and four independent fictional personas. Browser views were mediated; no physical-device or independent human-usability claim.

Present omitted the actual task; ready asks could be bypassed; the first classic-to-opt-in follow-up required reloads; rejoin showed a false missing-response message despite retained answers.

Evidence from the recorded session 7924 review, with the later report-scope correction.

Developer clarification

The test intentionally defaults to one screen. The developer supplied /host?surfaces=two and says the browser remembers that choice. “Presenting,” “What we heard,” the ready count, point-adjacent ask icons and “Send to the room” are current route vocabulary.

Ask generation is asynchronous. The proposed design keeps point-adjacent shortcuts, while adding visible readiness and a labeled route.

Supplied developer instructions, relayed during this design task; no new live inspection.

Deliverables and verification

The revised self-contained HTML separates live state from browsed state. It includes clickable workflow navigation, four working sidebar panels, scoped settings, round-history previews, explicit display publishing, ask send/close, and next-round increments. Example tabs reset the simulation.

This booklet is a separate vector rendering of the same design direction. Its pages were rendered and visually inspected. Browser layout verification of the HTML was blocked by this environment.

No implementation, deployment, live session edit, shared report, or website publication.

Open decisions to validate

Confirm which settings may apply immediately during each live phase. Define any future reopen/edit flow separately, including consequences for existing answers and ballots. Confirm vocabulary for Presenting / Present and Comments, plus the privacy wording.

Test with first-time facilitators, physical phones, a real second display, keyboard-only use, screen readers, slow ask generation, reconnects, and a larger room.

These are validation tasks, not claims that the concept has passed usability or accessibility testing.

Interpretation guardrail: selected-only anonymous Ideas are an owner-approved product choice, not lost data. A desire for a complete named research log is a separate use case and does not authorize changing the report’s anonymity model.
