ENGAGEMENTS

A calmer way to lead the room.

Seven detailed screen concepts and an interaction contract for a discoverable, predictable session.

PROPOSED · NOT IMPLEMENTED

Prepared for George Seib
Based on the Relay expansion review
Session 7924 · October 14, 2026

Offline HTML prototype + static design booklet. No production changes, live data collection, or published site.

THE CENTRAL CHANGE

Make the path visible. Keep the controls dependable.

A fixed button area helps, but the deeper problem is knowing where you are, what the room sees, and what will happen next.

01 Prepare
Choose the screen setup. Preview the route.

02 Answer & vote
Keep the real team task visible on every relevant screen.

03 What we heard
Read safely. Show preparing → ready for optional asks.

04 Ask, continue, or finish
Preview the format and privacy; make skipping explicit.

05 Leave an honest record
Votes, suggestions, decisions, and report scope stay distinct.

00

A visible route, not a hidden recipe.

Setup and wrap-up happen once per session. Answer → Vote → Review → optional asks repeat each round.

1

PREPARE + JOIN

Choose host-only or host + room screen. Open Presenting. Show participants joining.

2

ANSWER → VOTE

State the task. Confirm receipts. “Close answers & start voting” names the next effect.

3

WHAT WE HEARD

Read results and Workie. Show preparing → asks ready; keep point-adjacent shortcuts.

4

OPTIONAL ROOM ASKS

Preview Ideas, Choose, Rate, or targeted Comments. Send deliberately, or skip.

5

NEXT ROUND / FINISH

Repeat the same round structure, or preview the report with its stated privacy scope.

Where am I?

Round, phase, and page are always visible. A page counter is never confused with round progress.

What does the room see?

A read-only Present preview shows the public state, including “No ask is live” before sending.

What will this do?

The primary action states its effect. A short status line explains the transition before it happens.

What are my alternatives?

Optional asks can be skipped. The end of review offers Ask the room, Next round, and Finish session.

Developer context: the test deliberately defaults to one screen. The supplied /host?surfaces=two entry enables the two-screen workflow and is remembered in that browser. Asks prepare asynchronously beside related points; a count appears in the dock.

01

Start with the room setup.

Expose the two-screen choice and a lightweight route preview before asking a host to manage the session.

BEFORE THE FIRST QUESTION

A good start for everyone.

Check what the room sees and how replies will be used, then begin.

Session name

Relay expansion

Room setup

Host + Present display

✓ **4 participants are connected**
Maya, Theo, Lena and Omar are ready.

✓ **Room display is one click away**
Open Present, then move the window to the room screen.

✓ **38 eligible questions · 6 planned picks**
Negotiation is off; explicit picks are shown separately.

Preview the session path

Report: selected anonymous Ideas; aggregate Choose/Rate; named Comments. Briefing facts may be reused.

Ready: participants, display and question plan

Review question plan

Start first round

PRESENT · WHAT THE ROOM SEES

ENGAGEMENTS ROOM 7924

WELCOME

Relay expansion

What needs to be true before we grow?

4 people connected · Join with code 7924

Waiting for the host

Up next: Answer the first question

PATH GUIDANCE

Show the route.

A short expandable preview explains Answer → Vote → What we heard → optional asks → next round or finish.

Engagements
Ready

You’re connected.

Hi, Maya. The host will start the first round shortly.

Room 7924
Relay expansion

CONTEXT

One-screen is deliberate.

The test defaults to one screen; this proposal makes the choice visible.

BEHAVIOR

Preview, do not teach at length.

No modal tutorial. An optional route preview answers “what happens next?”

QUEUE

Do not promote every preview.

Separate auto-filled previews, explicit queued picks, and category exceptions.

02

Keep the actual task in the room.

The room display should support the activity, with a clear instruction, receipt count, and next step.

ANSWERS ARE OPEN

Keep the team task in view.

Which long-standing process or structure must be dismantled, who benefits, and how do we bring them with us?

3 / 4 answers received

Waiting for 1

Maya	✓ Received
Theo	✓ Received
Lena	✓ Received
Omar	Writing…

Close only when the room is ready. If a response is still missing, offer “Keep collecting” or “Close with 3 answers.”

3 answers received · closing moves the whole room to voting

Pause collection

Close answers & start voting

PRESENT · WHAT THE ROOM SEES

ENGAGEMENTS ROOM 7924

ROUND 2 · ANSWER ON YOUR PHONE

What should change?

Which long-standing process or structure must be dismantled, who benefits, and how do we bring them with us?

3 of 4 answers received

Up next: Read & rank responses

VOTING VARIANT

Carry the task forward.

Use the same task panel in voting. Show full responses before ranking, then “Close voting & show results.”

Engagements
Round 2 · Meiji

Your response is saved.

You can return to this room without sending it again.

✓ Round 2 answer received
Waiting for voting to open

OBSERVED

Present missed the actual task.

The task appeared on host and participant answering views, but not Present.

PROPOSED

Show honest readiness.

Count accepted submissions. Never infer that all participants are ready to close.

NAVIGATION

The dock stays in place.

Only the precise phase action changes; its location, size, and hierarchy stay stable.

03

Reading pages should only turn pages.

Keep the page pager inside the review card. Give asynchronous room asks a visible, non-blocking status.

WHAT WE HEARD · WORKIE

3 asks ready

Read at the room’s pace.

Results, suggestions and agreed decisions remain distinct.

Discussion topics · Page 4 of 6

Make the safety gate concrete.

Which measurable condition should be met before enrollment grows? A useful answer names the evidence and what happens if the condition fails.

Ideas · Preview ask Suggested from this point

← Previous page · 4 / 6 · Next page →

Preparing → ready: “Preparing follow-up questions…” becomes “3 asks ready” without moving the dock or stealing focus.

Page 4 of 6 · opening asks previews them; it does not send

Skip review & asks; start next round

Open room asks

PRESENT · WHAT THE ROOM SEES

ENGAGEMENTS ROOM 7924

ROUND 2 · REVIEW TOGETHER

Make the safety gate concrete.

Name the evidence that would justify adding more technicians.

Our task: Which long-standing process or structure must be dismantled, who benefits, and how do we bring them with us?

Workie · page 4 of 6

Up next: Optional room questions

END OF REVIEW

A real landing state.

At page 6, show three paths: Open room asks, Next round without asks, or Finish session. Do not transform the page arrow.

Engagements
Round 2 · Meiji

Look up at the room screen.

A prompt will appear here if the host asks for your input.

✓ Answer received
✓ Ballot received

OBSERVED

An ambiguous early exit.

Next round bypassed two ready asks. Exact pixel motion was not measured.

DEVELOPER CONTEXT

Asks are asynchronous.

Point-adjacent icons and the ready count can arrive after reading begins.

PROPOSED

Shortcuts plus a labeled route.

Keep icons near the source point, but do not rely on icons alone for discovery.

04

Make the next conversation deliberate.

Preview the prompt, format, audience, and privacy. A short optional step gives the host a clear choice.

OPTIONAL · BEFORE THE NEXT ROUND

What do you need from the room?

Choose a format, check the exact prompt, then send. Or skip this step.

Ideas
Gather suggestions

Choose
Compare options

Rate
Check a principle

Comments
Respond to an item

Prompt shown on phones and Present

What is one measurable gate Relay should pass before more technicians are added?

Why ask: surface concrete, testable conditions before discussing expansion.

Anonymous ideas. Only ideas selected by the host appear on Present and in the report.

Nothing has been sent yet · this action opens a live ask on phones

Skip asks and continue

Send Ideas to room

PRESENT · WHAT THE ROOM SEES

ENGAGEMENTS ROOM 7924

ROUND 2 · DISCUSSION

Take a moment to discuss.

The host is preparing an optional follow-up. Nothing has been sent.

Our task: Which long-standing process or structure must be dismantled, who benefits, and how do we bring them with us?

No ask is live

Up next: A question, or the next round

CURRENT → PROPOSED

Name the difference.

Current: Request feedback. Proposed: Comments, with a clear target. Ideas / Choose / Rate remain anonymous structured asks.

Engagements
Round 2 · Meiji

What is one measurable gate?

Preview only · Ideas

Your idea…
Up to 280 characters

Anonymous. Only selected ideas are shown and reported.

FORMAT

Clear jobs, not only icons.

Ideas gathers suggestions; Choose compares options; Rate tests a principle.

PREVIEW

Preserve a useful pattern.

The current phone prompt and purpose preview were helpful in the review.

SKIP

Optional means optional.

“Skip asks and continue” is a first-class choice; no mandatory question.

05

Make reconnects reassuring and truthful.

Receipt, presentation selection, and score are different states. Recovery should check the saved submission.

IDEAS · LIVE COLLECTION

What is one measurable gate?

Anonymous ideas. The host selects which ideas appear on Present and in the report.

3 / 4 received

1 reply still open

Reconnect without losing trust.

A receipt confirms acceptance. If status is uncertain after reconnecting, show “Checking your saved reply…” rather than saying nothing was sent.

3 of 4 replies confirmed · one participant is still replying

Keep collecting

Close ideas & view replies

PRESENT · WHAT THE ROOM SEES

ENGAGEMENTS ROOM 7924

ROUND 2 · IDEAS · REPLY ON YOUR PHONE

What is one measurable gate?

Keep it concrete. What should Relay prove before more technicians are added?

3 of 4 replies received

Up next: Review replies together

RECOVERY

Use the saved receipt.

After verification: “Reply received. You’re all set.” A reload must not imply that a retained answer disappeared.

Engagements
Round 2 · Meiji

Checking your saved reply…

You reconnected. We’re confirming your last submission.

Previous round:
✓ Answer received
✓ Ballot received

OBSERVED

A transition needed reloads.

First ask failed to reach existing participants after the opt-in transition.

OBSERVED

The message contradicted records.

Rejoin claimed no response despite scores and retained original answers.

PROPOSED

Treat uncertainty explicitly.

Check saved status, deduplicate retry, and retain draft plus receipt context.

06

Keep a preference separate from a decision.

Use clear totals and preserve differences. Show exactly how selecting an idea changes display and report scope.

CHOOSE · COLLECTION CLOSED

A preference, not a decision.

Which change should the team work on first?

A · Clarify assignment ownership — 3

B · Validate offline recovery — 0

C · Reset expansion commitments — 1

No expansion decision recorded.

Keep the 3–1 difference visible. Agreement on safeguards does not create a launch date or consent.

4 of 4 replies received · results visible · no decision implied

Ask another question

Next round

PRESENT · WHAT THE ROOM SEES

ENGAGEMENTS ROOM 7924

ROUND 2 · CHOOSE RESULTS

Which change comes first?

Assignment ownership 3

Offline recovery 0

Expansion commitments 1

4 replies · collection closed

Up next: Discuss, or start the next round

IDEAS VARIANT

Selection has a scope.

“4 submitted · 1 selected for display and report.” Button: “Select for display & report.” Unselected ideas remain excluded by design.

Engagements
Round 2 · Meiji

Results are ready.

3 chose ownership. 1 chose expansion commitments.

Your individual choice remains anonymous.

EVIDENCE

Structured asks mattered.

Observed 3–1 split; options rewritten here. This is not a newly measured poll.

PRIVACY

Keep intentional anonymity.

Do not restore names or mandate all submitted Ideas in the report.

MEANING

Write the decision separately.

Host-entered room notes capture conditions, dissent, and unresolved points.

07

Leave with an honest record.

A report preview should explain what is included, what is deliberately omitted, and what remains unresolved.

SESSION WRAP-UP

Leave with an honest record.

Keep suggestions, preferences and agreed commitments separate.

Answers and ballots	**24 / 24**
Workie analyses	**6**
Ideas	**4 received · 1 selected**
Choose / Rate	**Aggregate results**

Said in the room

“No approval to expand to all 40 today. Staged preparation remains conditional; no launch date or numerical reliability threshold has been agreed.”

Proposed report includes the original team tasks, response results, Workie, selected anonymous Ideas, aggregate Choose/Rate, named targeted Comments, and host-entered room notes.

Excluded by design: unselected Ideas and individual structured-ask identities.

Preview the record before saving or sharing

Review report scope

Preview report

PRESENT · WHAT THE ROOM SEES

ENGAGEMENTS ROOM 7924

SESSION COMPLETE

Thank you for thinking together.

Staged preparation is conditional.
No approval to expand to all 40 today.

6 rounds completed

Up next: Review the session record

REPORT CONTRACT

Scope, not a defect.

Selected-only Ideas are intentional. The improvement is making this visible before selection and at export, while adding the original team task.

Engagements
Session complete

Thanks, Maya.

Your responses and ballots were received.

Structured asks remain anonymous. Only selected Ideas appear in the report.

OBSERVED

A useful room note survived.

The retained note distinguished conditional preparation from approval.

PROPOSED

Report actual settings.

Distinguish active categories from broad catalog descriptions.

BOUNDARY

No automatic commitments.

Scores, Workie suggestions, and a rating do not become adopted decisions.

08

A stable contract for every control.

Consistency is about location, wording, and consequence. Context-specific verbs can change, but the job should never drift.

REGION / JOB	EXACT PROPOSED LABELS	RULE
Session header	Open Present	Always present. Opens only the audience surface; never exposes host controls.
In-card page pager	Previous page · N of 6 · Next page	Same order and position on every Workie page. Disabled at bounds; never becomes Next round.
Bottom-right phase action	Close answers & start voting Close voting & show results	Fixed slot, size and primary emphasis. Each verb names the room-wide effect.
Bottom-right phase action	Open room asks	Opens the preview / choice state. Does not send a participant prompt.
Bottom-right phase action	Send Ideas to room / Send Choose to room Send Rate to room / Send Comments to room	Names the selected format. “Send to the room” is the current app label; the longer variant is proposed.
Bottom-left alternative	Skip asks and continue	Always visible at the optional ask step. Skipping requires no question and no repetitive confirmation.
Review early exit	Skip review & asks; start next round	Explicitly states both skips. The end-of-review landing also offers Finish session.
Result selection	Select for display & report	Matches the actual consequence: selected anonymous Ideas appear on both surfaces.
Wrap-up	Preview report	Preview before persistence or sharing. Report scope is stated before and inside the preview.

Current vocabulary → proposal: Presenting → Open Present (role-explicit action); What we heard → kept as the review heading; Request feedback → Comments (with target); structured ask icons → keep as shortcuts alongside labeled format cards.

Implementation detail: reserve the dock’s layout track in every state; scroll only the content body. Keep primary action width large enough for the longest label. On narrow screens the dock becomes a full-width stacked control area.

09

Build the smallest useful improvement first.

Prioritize orientation and safe transitions before adding polish or more required steps.

P0

Make the route self-evident

Visible screen-layout choice; persistent room-display entry; current phase; audience preview; consequence-led action labels.

ACCEPTANCE CHECK

A first-time host can explain what happens next without the reviewer’s external recipe.

P0

Separate page navigation from round advance

Keep Previous / Next page local. Show an explicit optional ask checkpoint and a clear skip. Preserve point-adjacent shortcuts.

ACCEPTANCE CHECK

Read all pages, open one ask, skip all asks, and finish a session without guessing what an arrow does.

P0

Restore trustworthy receipts

Read saved submission status on reconnect; use pending / received / checking / failed; idempotent retry and draft retention.

ACCEPTANCE CHECK

Reload after answer, vote and each ask type: no false missing-response message or duplicate submission.

P1

Explain async readiness and privacy

Preparing follow-up questions → N asks ready. No focus jump. Preview anonymity, named comments, and selected-only Ideas scope.

ACCEPTANCE CHECK

Slow ask generation never blocks a host; a host can state what the report includes before sending.

P1

Keep queues and category rules understandable

Distinguish automatic previews from explicit picks. Reorder only the affected items. Mark and explain queued category exceptions.

ACCEPTANCE CHECK

Disable a category: current question stays, future automatic picks update, explicit exceptions are visible.

P1

Keep reports faithful to scope and meaning

Add original team tasks and actual enabled settings. Keep selected-only anonymous Ideas and aggregate Choose/Rate. Distinguish decisions.

ACCEPTANCE CHECK

A reader can reconstruct the task and conditional outcome without mistaking votes for approval.

10

What this concept establishes—and what it does not.

Grounded in the actual six-round review, with deliberate product choices and newly supplied context separated from findings.

Review evidence

Six rounds, 24 answers, 24 ballots, six Workie analyses, and four independent fictional personas. Browser views were mediated; no physical-device or independent human-usability claim.

Present omitted the actual task; ready asks could be bypassed; the first classic-to-opt-in follow-up required reloads; rejoin showed a false missing-response message despite retained answers.

Evidence from the recorded session 7924 review, with the later report-scope correction.

Developer clarification

The test intentionally defaults to one screen. The developer supplied /host?surfaces=two and says the browser remembers that choice. “Presenting,” “What we heard,” the ready count, point-adjacent ask icons and “Send to the room” are current route vocabulary.

Ask generation is asynchronous. The proposed design keeps point-adjacent shortcuts, while adding visible readiness and a labeled route.

Supplied developer instructions, relayed during this design task; no new live inspection.

Deliverables and verification

The self-contained HTML uses local sample state only: tabs, page pager, ask previews, edits, send/close states, reconnect receipts, selection scope, and a Present snapshot. Seven main states are independent samples.

This booklet is a separate vector rendering of the same design direction. Its pages were rendered and visually inspected. Browser layout verification of the HTML was blocked by this environment.

No implementation, deployment, live session edit, shared report, or website publication.

Open decisions to validate

Confirm whether one-screen hosting should expose a preview-only room surface. Confirm the final vocabulary for Presenting / Present and Comments. Verify privacy wording against the intended host and participant report policy.

Test with first-time facilitators, physical phones, a real second display, keyboard-only use, screen readers, slow ask generation, reconnects, and a larger room.

These are validation tasks, not claims that the concept has passed usability or accessibility testing.

Interpretation guardrail: selected-only anonymous Ideas are an owner-approved product choice, not lost data. A desire for a complete named research log is a separate use case and does not authorize changing the report’s anonymity model.
